

Welcome to East New York

NYC Real Estate Data Analysis Project

EAST NEW YORK

- Residential neighbourhood in eastern Brooklyn, close to the Queens border.
- Long history of working-class families and diverse immigrant communities.
- Neighbourhood is dominated by multi-family homes, small apartment buildings, and mixed-use properties.

WHAT IF I TOLD YOU FEWER HOMES ARE SELLING BUT PRICES KEEP RISING?

WHAT KIND OF MARKET IS THIS?

A MARKET BUILT ON SKEW

- Most homes cluster at low price-per-sqft
- A few extreme values pull the average up
- Median < Mean → Heavy Skew

Monthly Sales Count Over Time

Average Monthly Revenue Over Time

THE CONTRADICTION

SALES FELL

- Sales peaked before 2008
- Sharp decline after the financial crisis
- Prices rise steadily despite fewer sales

PRICES DIDN'T

- Average sale prices generally increased overtime
- Large spikes near 2021 suggest a few large property deals
- Trends suggest price growth driven by recovery, investor interest, and early gentrification.

INSIDE THE MARKET

NOT ALL PROPERTY TYPES PLAY THE SAME GAME

- Multi-family homes dominate sales
- Value is concentrated in a few property types
- Majority of transactions remain low-value

WHAT DRIVES PRICE

SIZE MATTERS BUT NOT ALONE

What the Graph Shows:

- Larger properties tend to have higher average sale prices (upward trend line).
- But property types with similar square footage still show different price points.
 - Example: “Two Family Brick” and “Two Family Frame” have similar sizes but different sale prices.
- The “Four Families” category sits far above the trend showing strong multi-family demand.
- The “One Family Attached” type sits below the trend showing weaker market value despite square footage.

Key Insight:

- Square footage influences price, but property type and building characteristics shift value up or down.
- This confirms that size alone cannot explain pricing patterns in East New York.

Top 6 Most Sold Property Types in East New York

BLIND SPOTS

ANOMOLIES IN THE DATA

Biggest Bargains:

- Certain properties in ZIP 11208 were predicted to sell around \$500,000, but instead sold for \$25,000–\$36,000.
- That's a difference of almost \$480,000 BELOW expected value.
- Often distress or foreclosure sales.

Most Overpriced:

- Some properties sold for \$2.8M–\$4.1M, while the model predicted only \$450,000–\$490,000.
- That is \$2M+ ABOVE the predicted value.
- Likely renovated, unique, or speculated properties.

Key Takeaways

EAST NEW YORK ISN'T GROWING, IT'S SHIFTING

Three Takeaways:

- Low volume ≠ low value
- Growth is uneven and selective
- Data shows signals, but not the full truth

Who This Matters To:

- *Homebuyers & Renters*: Understand true affordability
- *Investors & Developers*: Identify where value is actually growing
- *City Planners*: Detect early signs of neighborhood change
- *Real Estate Professionals*: Guide pricing & strategy
- *Researchers*: Learn from a complex, uneven market

Actionable Insights

EAST NEW YORK ISN'T GROWING, IT'S SHIFTING

- **Low activity ≠ low value**
 - Prices are rising even as sales remain low
timing strategies matter more than volume.
- **Value is concentrated in multi-family homes**
 - Investors should focus on these segments; they
drive most of the neighbourhood's value.
- **Large pricing anomalies reveal risk & opportunity**
 - Distress sales and overpriced properties
highlight the need for context beyond raw
numbers.
- **Quiet price growth signals affordability pressure**
 - Policymakers should watch for early signs of
displacement.
